

Swan Canning Estuary Water Quality Monitoring Project

Weekly Water Quality Report

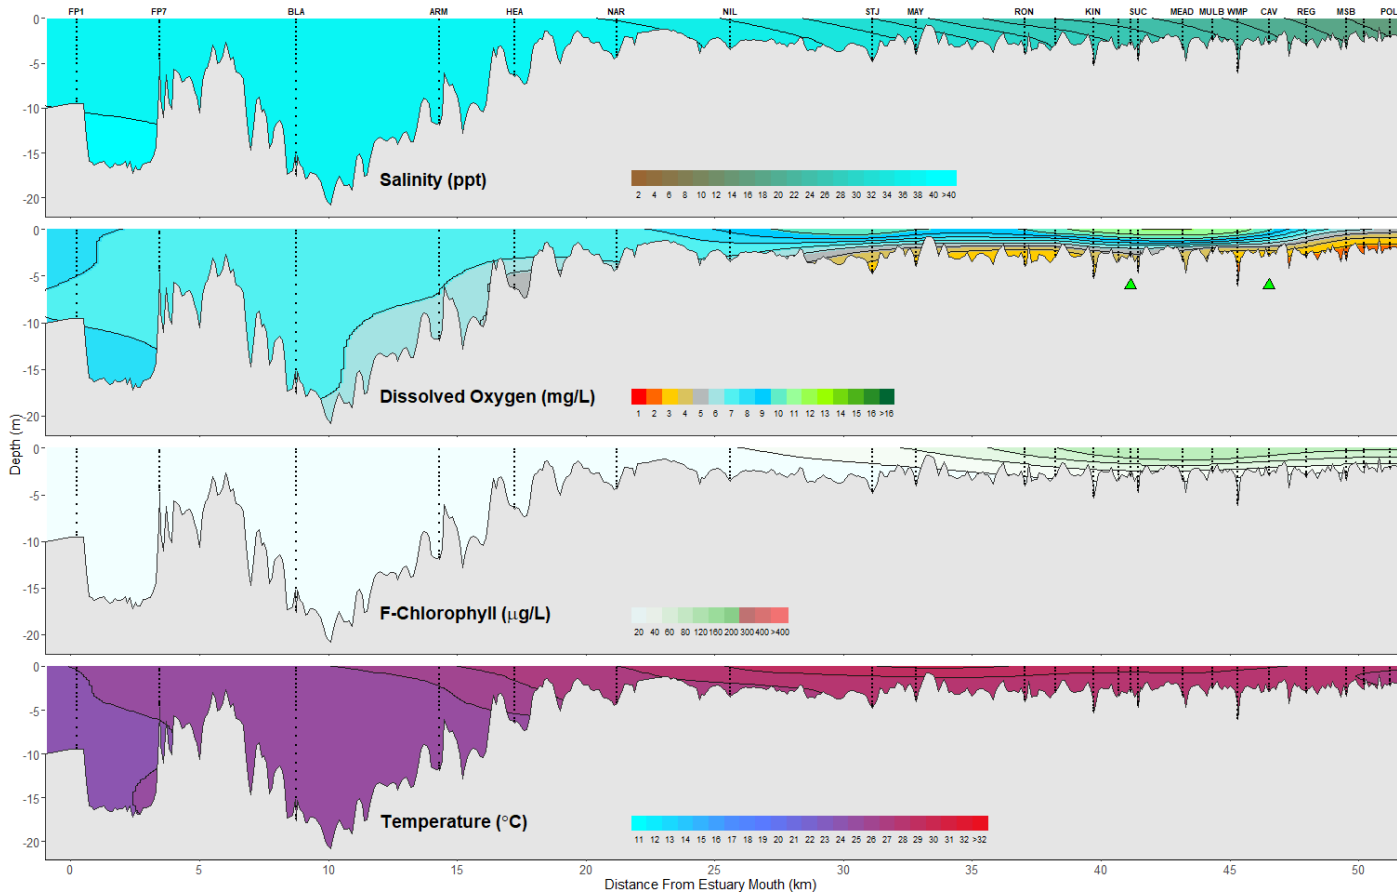

Lower Swan Canning Estuary to Upper Swan Estuary

9 March 2026

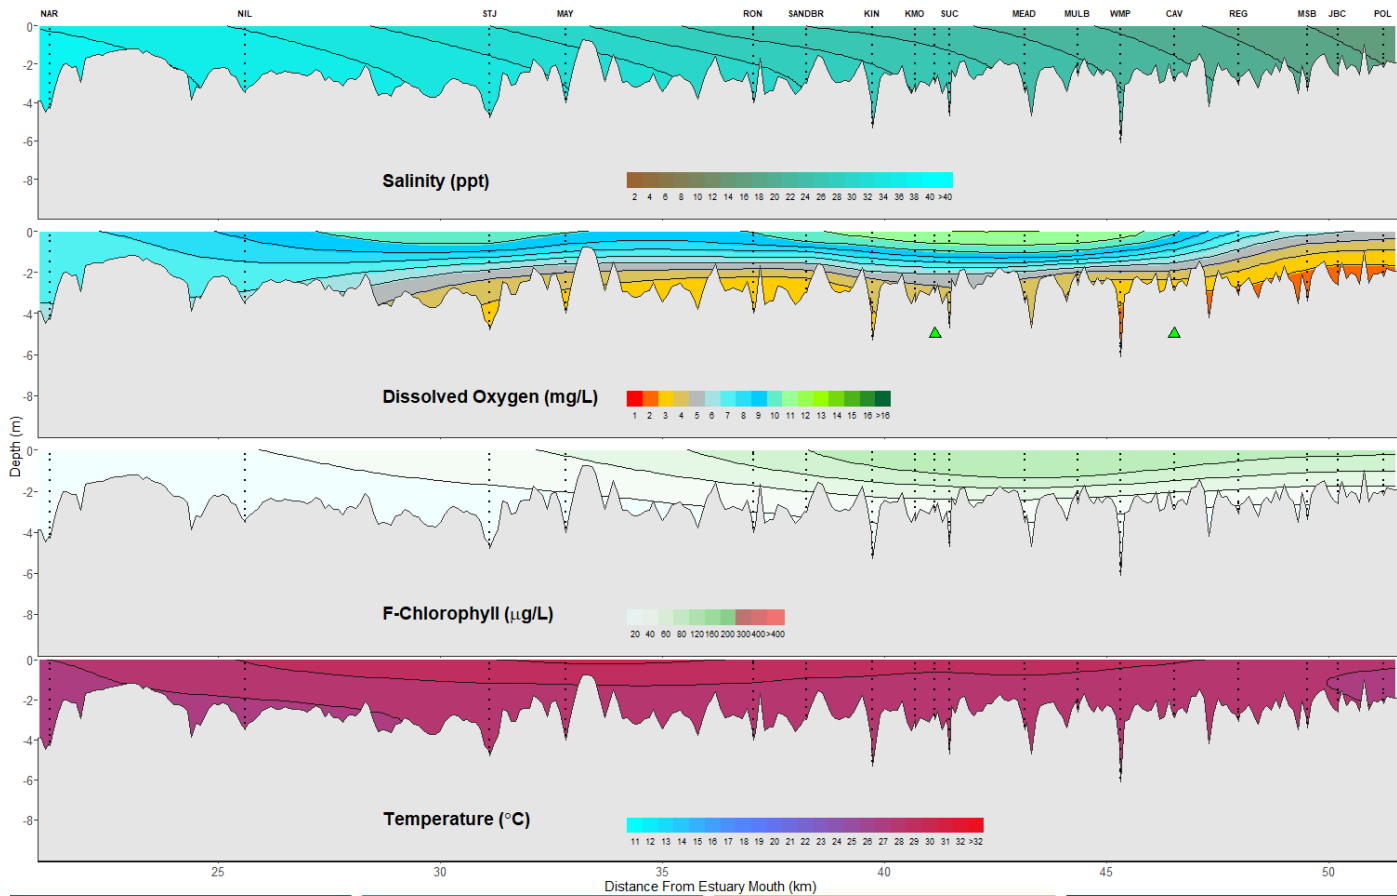

Prepared by

Rivers and Estuaries Science
Biodiversity and Conservation Science
Department of Biodiversity, Conservation and Attractions

Swan Canning Estuary - Water Quality Profiles – 9 March 2026

Middle and Upper Swan Estuary - Water Quality Profiles – 9 March 2026

Date: 9 March 2026

Weather & tide conditions: Conditions were cloudy with a south-westerly breeze up to 8.8 knots. The predicted tides at Barrack St were 0.69 m at 5:34 am (low tide) and 1.13 m at 2:42 pm (high tide). Perth recorded no rainfall in the week prior to sampling (Bureau of Meteorology).

Oxygenation: The Guildford and Caversham oxygenation plants were operable and triggered to provide oxygen in the 24 hours prior to sampling.

Lower Swan Canning Estuary (FP1 to NAR): The Lower Swan Canning Estuary was hypersaline and waters were oxygenated to well-oxygenated. Chlorophyll fluorescence was low and water temperatures ranged from 23.3 to 26.8 °C.

Middle Swan Estuary (NIL to RON): The Middle Swan Estuary was saline throughout. Waters were oxygenated to well-oxygenated with low oxygen bottom waters from STJ to RON. Chlorophyll fluorescence was low, with moderate levels at NIL and RON. Water temperatures ranged from 26.6 to 29.5 °C.

Upper Swan Estuary (SANDBR to POL): The Upper Swan Estuary was saline from SANDBR to KIN, brackish over saline from KMO to VIT, and brackish from SUC to POL. Waters were oxygenated to well-oxygenated, except for low oxygen bottom waters from KIN to VIT, MULB, CAV to REG and POL, and hypoxic bottom waters at SANDBR, WMP MSB and JBC. Chlorophyll fluorescence was generally low to moderate, with high levels detected in surface waters at SANDBR, from SUC to WMP and MSB. Water temperatures ranged from 26.8 to 28.9 °C.

NB: Profile plots are visual interpolations of measured parameters only. Detailed data are available at wir.water.wa.gov.au.

Oxygenation Plant Operational Status:

- ▲ Operating for part or all of the 24 hours prior to sampling
- ▲ Operable but not triggered to operate in the 24 hours prior to sampling
- ▲ Inoperable for part or all of the 24 hours prior to sampling

Definitions:

Salinity – fresh <5, brackish 5-25, saline 25-35, hypersaline >36 ppt
Dissolved oxygen – well-oxygenated >6 mg L⁻¹, oxygenated >4-6 mg L⁻¹, low oxygen >2-4 mg L⁻¹, hypoxic 0.5-2 mg L⁻¹, anoxic <0.5 mg L⁻¹
Chlorophyll fluorescence (low flow): low < 50 µg L⁻¹, moderate 50-150 µg L⁻¹, high 150-400 µg L⁻¹, extreme > 400 µg L⁻¹
