## Canning Estuary and Lower Canning River - Water Quality Profiles – 23<sup>rd</sup> February 2021

Date: 23<sup>rd</sup> February 2021

Weather & tide conditions: Conditions were clear with a predominantly easterly breeze of up to 11 knots. The predicted tides at Barrack St were 0.57 m at 6:42 am (low tide) and 1.13 m at 8:26 pm (high tide). Gosnells recorded 0.5 mm of rainfall during the week prior to sampling (Bureau of Meteorology).

Oxygenation: The Bacon St and Nicholson Rd oxygenation plants were triggered to provide oxygen in the 24 hours prior to sampling.

Canning Estuary (downstream of Kent St Weir): The Canning Estuary was saline from SCB2 to SAL and brackish over saline from RIV to CASMID. Surface waters were oxygenated or well oxygenated and bottom waters were hypoxic at RIV and anoxic at CASMID. Chlorophyll fluorescence was highest at CASMID indicating higher microalgal activity in that area. Water temperature ranged from 24.4 to 29.2 °C.

Lower Canning River (upstream of Kent St Weir): The Lower Canning River was fresh. Surface waters were oxygenated or well oxygenated and bottom waters were low in oxygen at KS7 and PAC and hypoxic at ELL. Chlorophyll fluorescence was highest at PAC indicating higher microalgal activity in that area. Water temperature ranged from 22.7 to 26.2 °C.

NB: Profile plots are visual interpolations of measured parameters only. Detailed data are available at [wir.water.wa.gov.au](http://wir.water.wa.gov.au).

**Oxygenation Plant Operational Status:**

- ▲ Operating for part or all of the 24 hours prior to sampling
- ▲ Operable but not triggered to operate in the 24 hours prior to sampling
- ▲ Inoperable for part or all of the 24 hours prior to sampling

**Definitions:**

Salinity – fresh <5, brackish 5-25, saline 25-35, hypersaline >35  
Dissolved oxygen – well oxygenated >6mg/L, oxygenated >4-6mg/L, low oxygen >2-4mg/L, hypoxic 0.5-2mg/L, anoxic <0.5mg/L
