Middle and Upper Swan Estuary- Water Quality Profiles- 2 August 2021

Date: 2 August 2021

Weather & tide conditions: Conditions were overcast with a north easterly breeze of up to 5 knots. The predicted tides at Barrack St were 1.1 m at 6:07 am (high tide) and 0.74 m at 6:52 pm (low tide). Perth recorded 67.6 mm of rainfall during the week prior to sampling (Bureau of Meteorology).

Oxygenation: The Guildford and Caversham oxygenation plants were not operational during the 24 hours prior to sampling.

Lower Swan Canning Estuary (FP1 to NAR): The Lower Swan Canning Estuary was brackish over saline between FP1 and FP7, fresh over saline from BLA to HEA and fresh at NAR. Surface waters were oxygenated or well oxygenated and bottom waters were low in oxygen between ARM and HEA. Chlorophyll fluorescence was low throughout this zone. Water temperatures ranged from 12.5 to 17.2 °C.

Middle Swan Estuary (NIL to RON): The Middle Swan Estuary was fresh throughout, waters were well oxygenated and chlorophyll fluorescence was low throughout this zone. Water temperature ranged from 12.4 to 12.7 °C.

Upper Swan Estuary (SANDBR to POL): The Upper Swan Estuary was fresh throughout, waters were well oxygenated and chlorophyll fluorescence was low throughout this zone. Water temperature ranged from 12.3 to 12.4 °C.

NB: Profile plots are visual interpolations of measured parameters only. Detailed data are available at wir.water.wa.gov.au.

Oxygenation Plant Operational Status:

- ▲ Operating for part or all of the 24 hours prior to sampling
- ▲ Operable but not triggered to operate in the 24 hours prior to sampling
- ▲ Inoperable for part or all of the 24 hours prior to sampling

Definitions:

- Salinity** – fresh <5, brackish 5-25, saline 25-35, hypersaline >35
- Dissolved oxygen** – well oxygenated >6mg/L, oxygenated >4-6mg/L, low oxygen >2-4mg/L, hypoxic 0.5-2mg/L, anoxic <0.5mg/L
